

Military Quality Standards at Competitive Prices

UCOM INC fills a specific niche in the marketplace by providing the highest quality heavy duty vehicular electrical switches and components at competitive prices. UCOM products are renowned for their toughness and dependability in extremely demanding situations across the world in military usage, and even in outer space in the Hubble Telescope.

We make more than military products, however. At UCOM, we pride ourselves at being able to produce products for many commercial market applications while strictly maintaining the demanding quality standards required by the military, but at competitive prices.

We utilize our in-house engineering staff to improve upon products that others have long felt are "good enough" the way they are, while at the same time reducing manufacturing cost. Perhaps even more important is our ability to reverse engineer a wide array of products, while always keeping high quality and affordable cost at the forefront. Just think of it as American ingenuity at its finest.

Every day, we continually explore new types of products and the ways in which they may be used, while *always* maintaining our standards of reliability, quality and dependability.

UCOM INC-Superior Competitive Products-by Design
